This is how I subscribe to events in IBM Watson IoT Platform Javascript SDK:

```javascript
import { ApplicationClient, ApplicationConfig } from '@wiotp/sdk';

let identity = {
  orgId: 'orgId',
  typeId: 'typeId',
  deviceId: 'deviceId'
};

let auth = {
  key: 'key',
  token: 'token'
};

let options = {
  domain: 'internetofthings.ibmcloud.com',
  apiRoot: null,
  logLevel: 'info',
  mqtt: {
    port: 8883,
    transport: 'tcp',
    cleanStart: true,
    sessionExpiry: 3600,
    keepAlive: 60,
    sharedSubscription: false,
    caFile: null
  },
  http: { verify: true }
};

let appConfig = new ApplicationConfig(identity, auth, options);
let appClient = new ApplicationClient(appConfig);
```
